CONSULTANCY
CONSTRUCTION
PLANNING

You are the focus of our thoughts and actions.

We want the optimal solution for your needs. Therefore, it all starts with a conversation in order to understand and develop the right solution for you.

We place your concept alongside our many years of experience and tailor your solution to current technical know-how. Our in-house planning, a modern 3D design and our experience in scheduling ensures that only solutions which are economical and also exist in daily practice are realised.

- Individual Support
- Punctuality
- Economy
- Cutting-edge Technology
- Individually optimized Solutions

PRODUCTION
ASSEMBLY
COMMISIONING

Every system is only as good as its weakest link.

That's why we value attention to detail and dedicate ourselves to even the littlest things Great attention.

B&K has its own production line in a variety of plant components, both made-to-order and produced from a large standard palette.

After the production of the system components in our factory and its transportation to the destination, one of the most important phases is realised.

Throughout the entire process, our engineers and technicians are on site and monitor every single step. So you get the security you want.

The integration of your production process, the smooth functioning of its co-ordination within pre-defined parameters and the handover of the plant documentation completes the basic work.

We are also always available in the period following for questions and solutions.

P R O D U C T S

| RAW MATERIAL INTAKE |
| RAW MATERIAL STORAGE |
| HANDLING - DISPENSING |
| WEIGHING |
| FLUID SYSTEMS |
| FILLING |
| CONTROLS |

RAW MATERIAL STORAGE

Silo
Day tank
Liquid tanks

RAW MATERIAL INTAKE

BIG-BAG loading stations
Bag loading stations
Combined systems
Automatic barrel emptying systems

CONVEYANCE DOSAGE SYSTEM

Mechanical systems
Conveyance - Belt feeder
Guide rail - chain haulage
Suction and pressure systems
Dense phase conveying

WEIGHING SYSTEMS

Hopper scale
Belt scale
Suction scale

FLUID SYSTEMS

Storage
Treatment
Liquid scales
Cylinder feed system
Suction and pressure systems

FILLING TECHNOLOGY

Bag filling systems
Barrel filling systems
BIG-BAG filling systems
Combined systems

CONTROL VISUALISATION

Planning
Control cabinet construction
Software programming
Visualisation of user interface
Touch screens
Database management
Interface communication
E-Installation
Assembly
Commissioning

| EXPERIENCE |
| RELIABILITY |

Tradition is not an end in itself -

- but sometimes it helps in solving problems, because experience is a good teacher.

B&K was established in 2002 out of the tradition-rich company Fix Steimel GmbH. The experiences and innovations left their mark in the foundation of the company. The result, over ten years later, is a company that has grown to more than 30 employees that plans, develops, designs, manufactures, assembles and puts plants into operation all over the world.

At **B&K** you have a personal contact who will accompany you from the first idea to the approval and beyond.
