SILO

We are happy to configure your entire silo plant, from the truck receipt to the filling of silos, including filters.

In logistics and transport, as well as in the set up, you can totally rely on us.

DAY TANK

To add a product reserve, in the vicinity of a mixer for example, the raw materials are conveyed from large silos into smaller day tanks and are positioned closer to the production plant.

LIQUID TANKS

Both liquids and oils can be considered as raw materials. Here, the material is accurately matched to the stored chemicals.

Commissioning

We see raw material storage as the stockpile as well as the treatment of a wide variety of raw materials.

These may be powders, granulates or liquids.

We offer a wide range of solutions for raw material storage, from small day tanks to large silos.

Finish	Symmetrical, asymmetrical, round and square
Material	Stainless steel, normal steel, aluminum, textile, rubber
Useful volume	0,05m ³ to > 200m ³
Atex	ATEX-compliant design and execution available
Custom-made	Design and production available
